SEMESTER PROJECT · PART 3

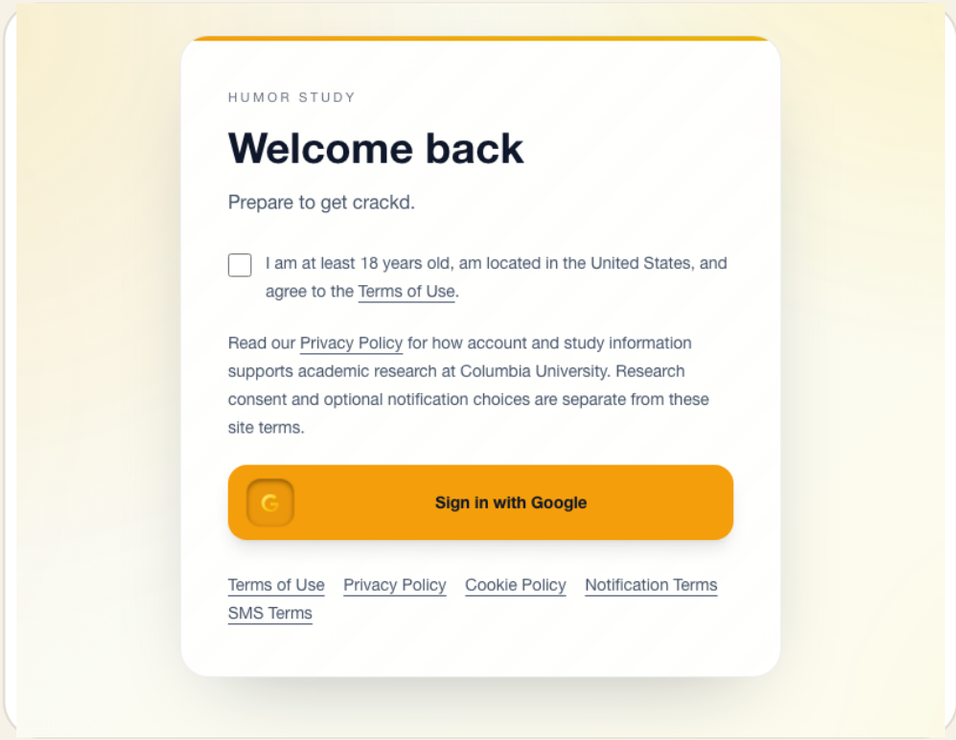

A clearer study journey

and a way to revise past likes

Iteration 2 progress: clear caption choices, safe pausing, and participant-controlled heart updates in previous studies.

PARTICIPANT PERSONA: NADIA

Nadia is a fictional composite adult participant. She wants to understand the task, respond honestly, and change a past heart response if she changes her mind.

Actual local sign-in screenshot

Clear choices

Like a funny caption or move on when unsure. Skipping is not a negative vote.

Safe pause

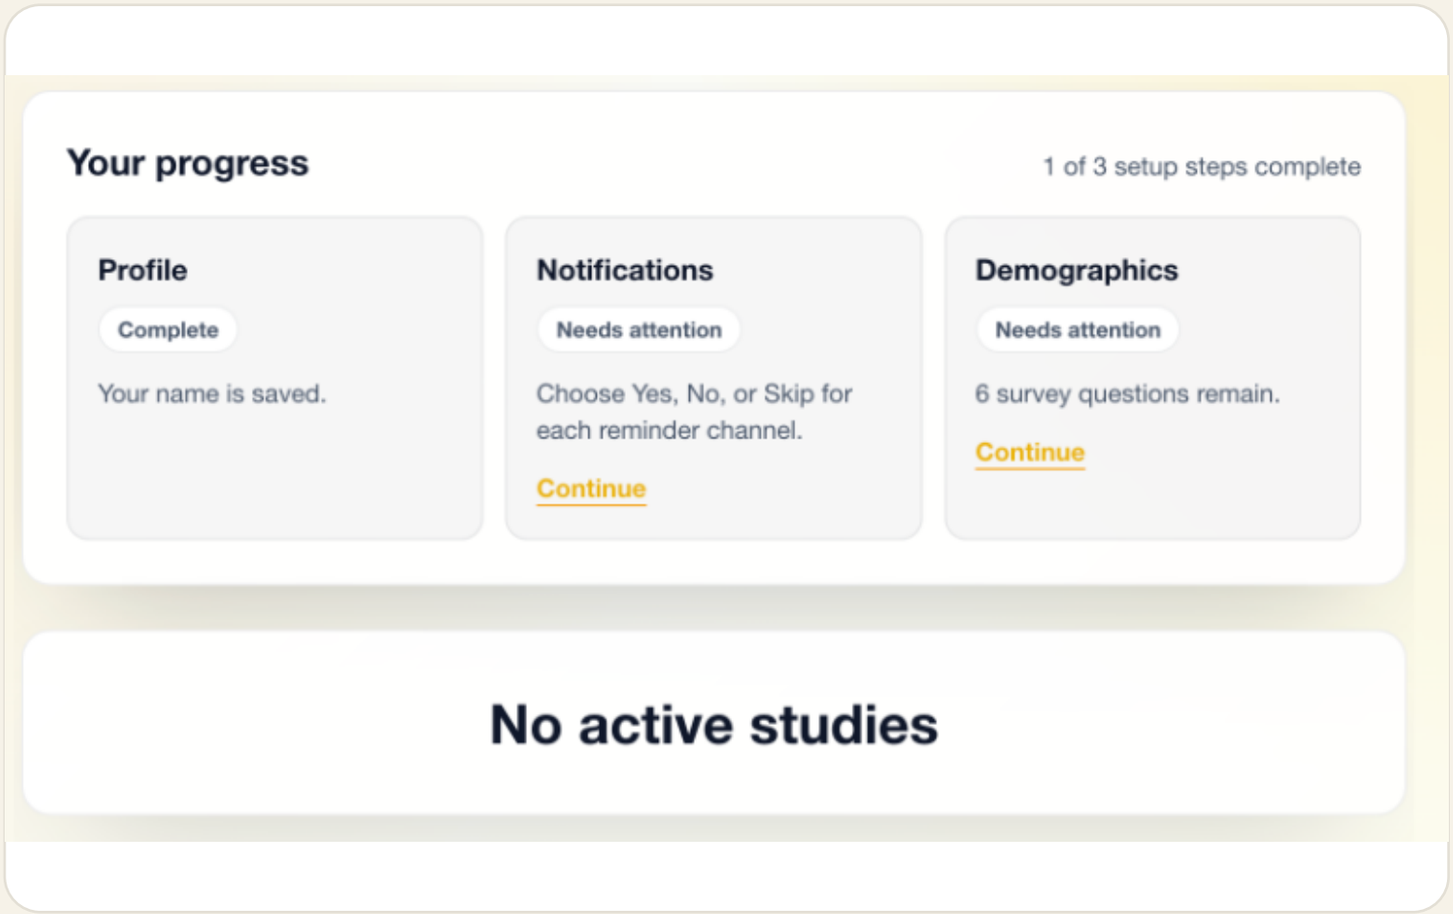

Save the checkpoint before returning home; resume from the saved place.

Participant control

Review previous captions and revise your own likes, including adding a skipped caption.

1. See setup and study status

Nadia can identify what remains and whether to start, resume, or review results.

Setup progress

Profile, notification preferences, and demographics show what still needs attention.

Study state

Start, resume, or view results depends on participation status.

Previous studies

A separate history path lets eligible participants review and update their own likes.

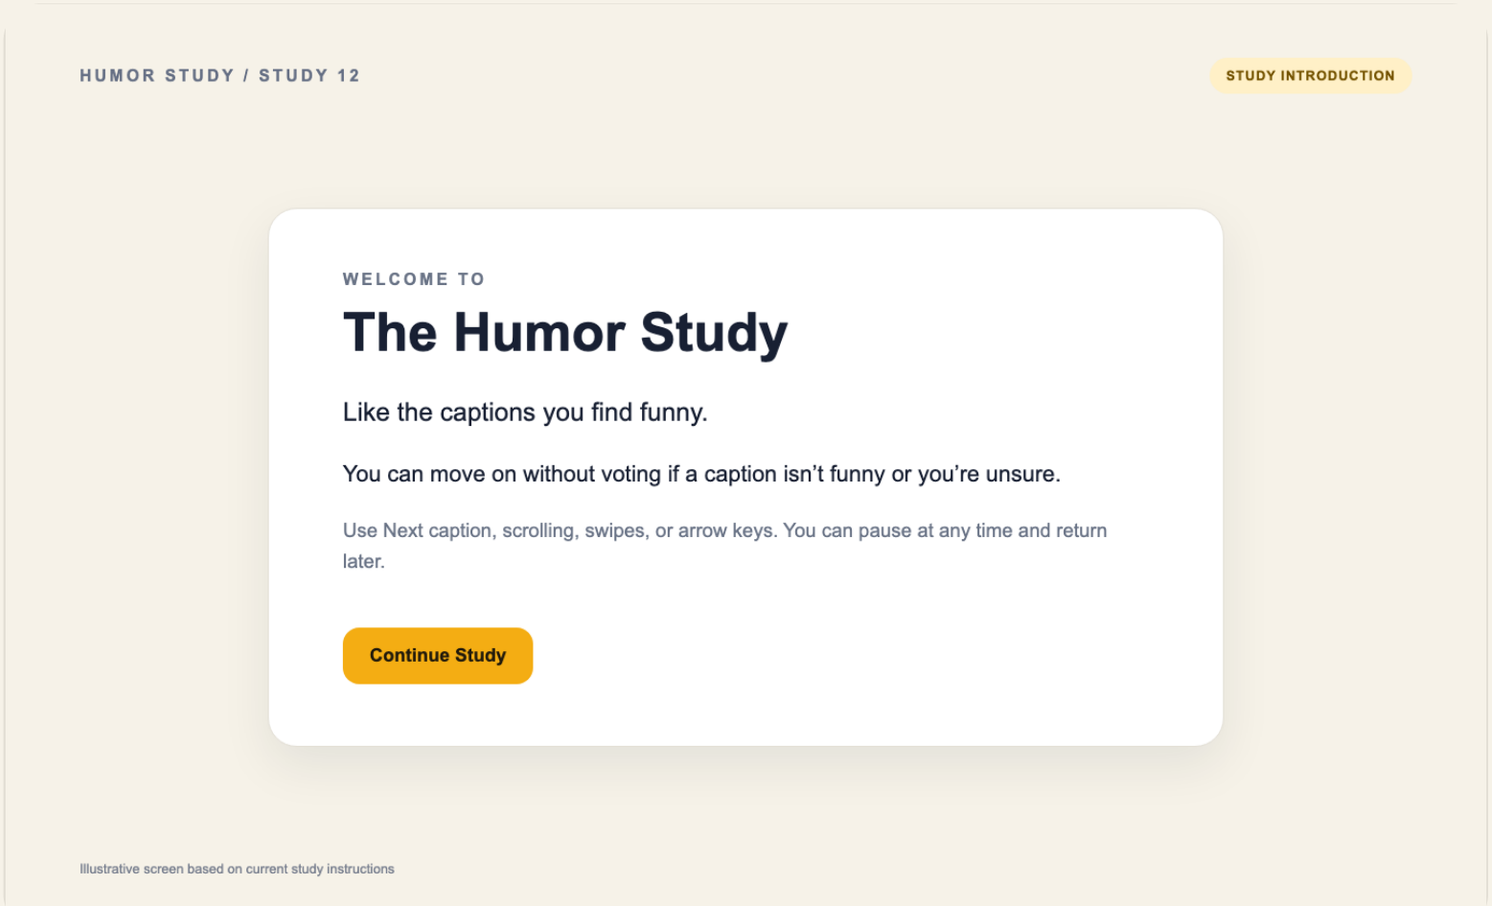

Actual user-provided dashboard screenshot from an earlier project state; it predates the archive link.

Participant benefit

The dashboard reduces guessing about what to do next; historical vote editing is limited to the participant’s own study responses.

2. Explain the task before it begins

The introduction gives a clear start/continue action and makes voting optional when unsure.

ILLUSTRATIVE SCREEN BASED ON CURRENT BUILD

Positive response

Like the captions you find funny. A like does not automatically advance.

Optional response

If a caption is not funny or is uncertain, Nadia can continue without voting.

Clear entry point

Start Study begins a run; Continue Study returns to an unfinished run.

This clarifies existing vote behavior; it does not add a dislike rating.

3. Make “move on” an explicit choice

The Next caption control complements scrolling, swipes, and keyboard navigation.

HUMOR STUDY / STUDY 12

CAPTION 24 / 80

CAPTION 24

Caption text appears above the image, so participants can focus on the joke and its context.

Caption image shown fully without cropping

Next caption

Illustrative screen: Next caption advances without submitting a like or dislike

Like

Records the positive “funny” response.

Next caption

Advances without submitting a like or negative vote.

Same study flow

Existing navigation, progress, lazy loading, and completion behavior remain.

ILLUSTRATIVE · AUTHENTICATED STUDY SCREEN UNAVAILABLE

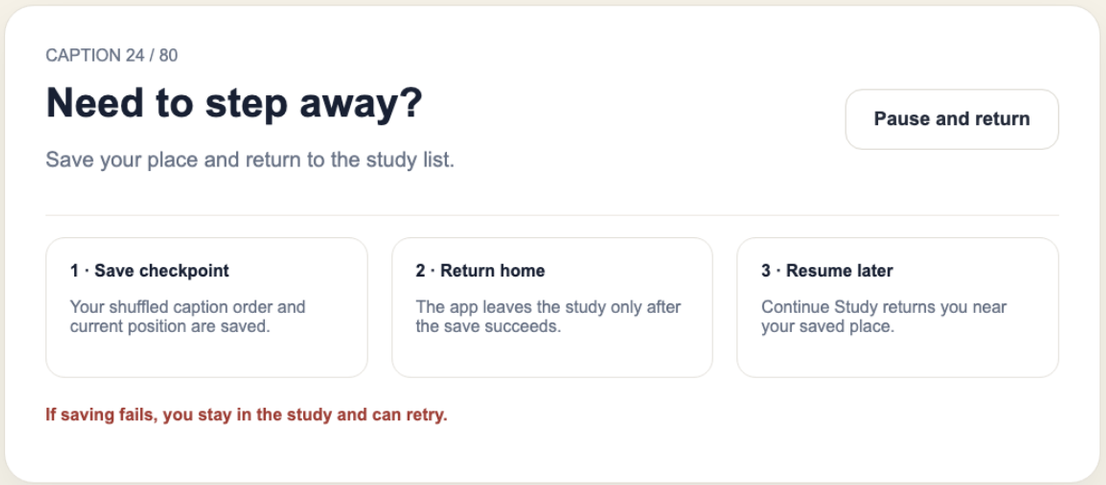

Moving past a caption is a navigation choice, not a dislike response.

4. Pause without losing her place

The return action is gated on a successful checkpoint save.

HUMOR STUDY / STUDY 12

PAUSE AND RESUME

Illustrative screen: voting and navigation are held while the checkpoint is saving

1 · Save

Store the caption order, current position, and run progress.

2 · Return

Navigate home only after the save confirms success.

3 · Resume

Continue Study reopens the unfinished run near the saved place.

ILLUSTRATIVE FLOW · IMPLEMENTED SAVE-FIRST BEHAVIOR

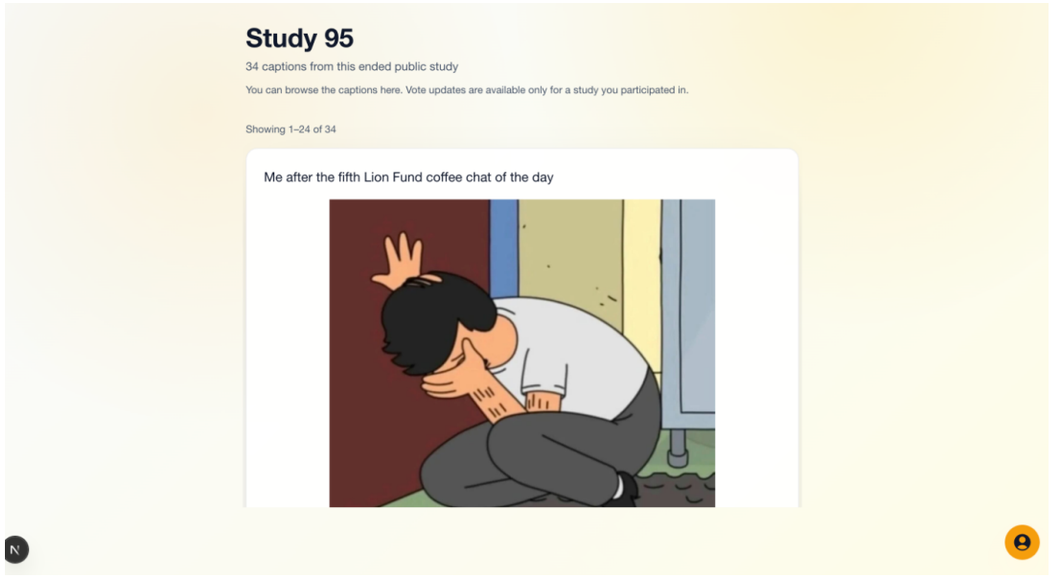

While saving, voting and navigation are held. If saving fails, the participant stays in the study and can retry.

Rate captions in previous studies

Any signed-in user can now add or remove a heart on an ended public study.

Before · rating controls were missing

User-provided screenshot of Study 95

WHAT THE SCREEN SHOWED

“Vote updates are available only for a study you participated in.”

This account could browse captions but had no heart controls.

After · heart editing is available

Illustrative screen · not a live account screenshot

HUMOR STUDY / PREVIOUS STUDIES

Study 95

34 captions from this ended public study

Signed in? You can update your heart response.

A caption you already liked

Liked · remove like

A caption previously skipped

Like this caption

BOUNDARIES THAT PROTECT THE DATA

Only the signed-in user’s own heart response changes. Saved completion stats remain unchanged.

How the participant controls fit together

Each action has a different purpose and produces a clear next state.

1

PREPARE

See setup progress

2

CHOOSE

Start / Resume / Results

3

PARTICIPATE

Like or Next caption

4

PAUSE

Save, then return

5

FINISH

End, then see stats

6

REVISIT

Revise own likes

Navigation is not a vote

Moving to the next caption does not create a dislike or change the positive heart response.

Historical edits have a boundary

Only the participant can change their responses; an already-saved completion summary is preserved.

Transparent participant experience

The archive explains who can edit, what can change (heart responses), and what cannot (a saved completion stats snapshot).

What is implemented and what remains

This is a working local version; it does not claim that a PM review or Vercel deployment has happened.

Participant-facing changes

Signed-in users can revise their own past likes, including previously skipped captions.

Automated verification

Participant-flow tests: 41 passed. Image tests: 6 passed. Settings tests: 34 passed. Production build passed.

Authorization and data behavior

Any signed-in user can edit their own hearts on ended public studies. Exact study-caption match; saved completion stats stay unchanged.

Limits of this evidence

No authenticated browser session was available for direct study/archive interaction testing. Those feature screens are labeled illustrative.

Review and deployment status

- Second PM demonstration and actual feedback: pending; record the PM’s response after review.
- Vercel application URL: not deployed / not available yet. Do not use a local localhost address as the public review URL.

Next iteration: show the revised flow to the PM, observe whether vote editing and saved-stat behavior are clear, and prioritize from actual feedback.
